SK series enable stable loop formation under severe sewing conditions

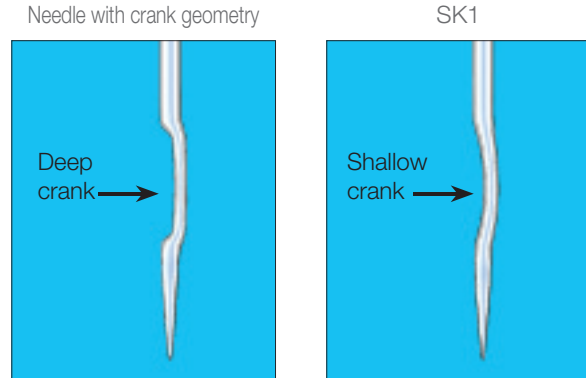

SK Series

Skipped stitches and thread breakage may occur by missed thread pick up which unstable loop formation can cause. The deep scarf and the special shaped area around the eye of SK series guarantee stable loop formation and beautiful seams.

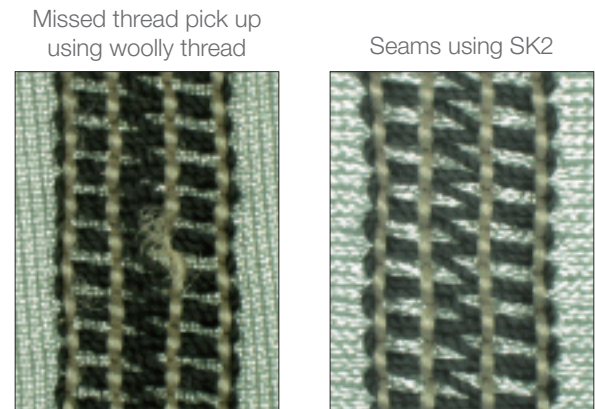

SK1 Series *patented needle

This series is effective in preventing skipped stitches of thick materials including car seat, denim, etc. The key feature enables easy looper adjustment without any processing of needle plate compared to other needles with crank geometry.

SK2 Series

This series with a deep scarf enables consistent seam appearance under severe conditions. FLX118-SK2 is effective in preventing missed thread pick up using high-elastic threads including woolly thread.
